

# PORT CRANE SOLUTIONS

## Spare Parts

Trust in Gantrex to keep your crane on track!

We have a wide variety of spare parts for your STS and Yard Cranes. Our engineers are eager to enhance your crane's performance through analysis of original parts and systematic improvements of either materials or fabrication techniques. We can also manufacture any part as per the original drawings if you have them. No drawings no problem, our engineers can use the latest measuring techniques to ensure the new parts fit like a glove.

As with all Gantrex products, our spare parts come with our technical expertise, quality guarantee, on time delivery and installation support where needed. We use industry best practices to design and supply: **wheels, sheaves, drums and rollers.**

### Wheels

Gantrex can supply all types of crane wheels, whether your trolley is rope or motor driven it makes no difference to us, Gantrex will keep you on track!

We can supply both trolley and Gantry wheels to the original drawings or have our engineers analyze the wear on your wheels and come up with recommendations for improvements. Our engineers and technicians have decades of experience in assembling and maintaining cranes, they have what it takes to understand the issues on your wheels and recommend improvements that will improve the durability of the system as a whole.

**SUPPLYING PORT CRANE SOLUTIONS IN EUROPE SINCE 2015**

## Sheaves

Gantrex uses specialized fabrication techniques to ensure the necessary high wear surfaces are hardened to increase its durability. It is always recommended to have the sheaves fabricated from a solid piece rather than multiple pieces welded to avoid premature failure at the welds.

## Rollers

Rollers are extremely high wear items as they protect the crane wire ropes from wearing on the crane's steel structure. It is always good practice to have a few too many rollers in your stock and Gantrex can help you in acquiring all the rollers you may need!

## Drums

Gantrex can supply the main, boom and trolley drums for your cranes, the drums can be supplied from your original drawings or we can apply our engineering skills and provide you with drums that fit like a glove if you don't have your original drawings handy.
